Date: **Moderator: B. Jordaan**

Name and Surname:

READ THE STORY AND ANSWER THE QUESTIONS:
Use the Answer sheet to complete the answers.

Garrett Morgan, Inventor

Few inventors have contributed more to public safety than Garrett Morgan. Morgan was born in Paris, Kentucky in 1877. As a teenager, he moved to Cleveland, Ohio, where he became a lifelong resident. Morgan found work as a sewing machine repairman. His abilities for fixing and improving machinery were excellent. In 1901 he developed his first invention, a belt fastener used for sewing machines. By the time he was thirty, Morgan had opened his own sewing repair business.

He used the considerable money he had earned from several businesses to work on a favorite project—the invention of what he called a safety hood and smoke protector. It was an early kind of gas mask that supplied air to fire fighters and other emergency workers who worked in smoke-filled areas.

Morgan couldn't find a manufacturer for his gas mask. It looked like his dream was turning to ashes. Then on July 25, 1916, a terrible occurrence took place in Cleveland. An explosion in a tunnel under Lake Erie caused dozens of workers to be trapped. Fire fighters weren't able to save them because the tunnel was filled with deadly smoke and gas. The rescuers themselves could become victims. Someone at the scene had heard of Morgan's safety hood and contacted him.

Morgan rushed to the tunnel with four of his safety hoods. He put one of the hoods on and handed the other three to his brother and two fire fighters. Regardless of the danger they faced, the four men entered the tunnel.

Morgan and the others rescued 32 of the trapped workers from certain death. Garrett Morgan received the praise and respect of an entire city. He was awarded a medal from the mayor. A consequence of all this publicity was that manufacturers rushed to compete for his safety hood. Soon fire departments across the nation were buying his invention. During World War I, the United States government bought the Morgan safety hood as standard equipment for American soldiers fighting in Europe.

Some years later, Morgan came up with an invention that equaled his safety hood. He was on a crowded Cleveland street when he observed a dreadful accident. An automobile collided with a horse-drawn carriage at an intersection.

Morgan believed the accident wouldn't have happened if there had been some kind of traffic signal to control the flow of cars, horses, and pedestrians. He identified traffic safety as a national priority and committed himself to improving it.

Morgan invented a three-way traffic signal. It was a pole shaped like a T and had three positions: stop, go, and stop all traffic for pedestrians.

While other inventors had made traffic signals, Morgan's was the first to be patented and was the most practical. His traffic signal was soon seen on roadways throughout the United States and Canada. It was replaced some years later by the green, red, and yellow traffic signal we're familiar with today.

Garrett Morgan died in 1963 at the age of 86. His inventions have made the world a better and safer place for all of us.

Answer the questions properly

1) Where did Morgan live as a young teenager and for the rest of his life? (2)
2) What was Morgan's first work he accepted? (2)
3) Where and when was Morgan born? (3)
4) What was his first invention? (2)
5) What occurrence happened in Cleveland? (2)

6) **Answer True or False:**

a) Fire fighters alone, could get to trapped workers in the tunnel. _____

b) Someone at the scene contacted Morgan, to use his safety hoods. _____

c) During World War I I, United States government bought Morgan's safety hood for American soldiers. _____

(3)

Answer the questions

7) With what was the tunnel that exploded, filled with? (2)
8) How many safety hoods were available, to rescue trapped workers? (1)
9) Who helped Morgan to save the trapped workers? (4)
10) How many people were rescued? (1)
11) The major awarded Morgan with a (a)_____ and Morgan received (b) _____ and (c) _____ from the entire city. (3)
12) What was according to Morgan a national priority, he committed himself, improving it? (2)
13) Describe Morgan's three-way traffic signal invention:

_____
_____
_____ (4)

14) What was seen on roadways throughout the United States and Canada? (1)
15) When an automobile collided with a horse-drawn carriage, Morgan believed that the accident would not occur if there was some kind of _____ (2)
16) Later Morgan's traffic light was replaced with, _____, _____ and _____, that is familiar to us today. (3)
17) What were the benefits of Morgan's inventions for us? (3)

Total: ____/40
____/20
